

Sustainability at Green Future Consulting Ltd

Green Future Consulting Ltd is committed to operating responsibly, complying with all legal obligations, preventing pollution and minimising its environmental footprint. As a small consultancy, we believe that consistent, transparent choices add up to meaningful impact.

Our key commitments include:

- 100% renewable electricity powering all business operations.
- Zero tailpipe emissions for business travel – all company mileage is undertaken using an electric vehicle (Polestar 2) with published lifecycle carbon data.
- Responsible travel – flights are only taken when essential and will be fully offset through a UK based verified scheme.
- Sustainable web hosting – our website is hosted with Krystal, a UK-based B Corp powered entirely by renewable energy and committed to high-efficiency, low-impact data centres.
- Responsible IT sourcing – all company laptops and devices are selected based on verified sustainability credentials such as EPEAT, ENERGY STAR, recycled materials, and circular design principles.
- Paper-light operations – printing is minimised and uses recycled or FSC-certified materials where unavoidable.
- Reuse and recycling – all IT equipment is reused, refurbished, or recycled responsibly at end of life.

In addition, our founder maintains a long-standing personal commitment to the RSPB, reflecting our belief that protecting nature and biodiversity goes hand in hand with addressing climate change.

These commitments are reviewed annually to ensure our operations continue to align with stakeholder values, best environmental practice and emerging low-carbon technologies.
